

Highway 30 Project Newsletter

Construction includes:

- Sanitary sewer collection system and service lines
- New water mains and service lines
- Storm Sewer System
- Street Reconstruction
- Sidewalks
- Driveway and turf restoration
- Private utility relocations

PROJECT UPDATES

The drier weather conditions in September have helped keep the construction moving on the project:

- Concrete curb & gutter is mostly complete
- The first layer of blacktopping has been placed
- A majority of the concrete sidewalk and driveway work has been completed.
- Sodding and turf restoration work has progressed in areas on the west and east end of the project.

With continued dry weather, the following work will continue on the project:

- Construction of the remaining driveways and sidewalks
- Placement of a second layer of blacktop pavement. The third and final layer is planned to be placed next summer
- Completion of the sod and turf restoration work
- Installation of signage and roadway striping

DRIVEWAY ACCESS: Please keep in mind that once new concrete driveways and curb & gutter are placed, access will not be available for approximately one week. This is required to allow the concrete to cure before applying traffic loads. Please feel free to call one of the project contacts if there is a special access need that you have.

PROJECT SAFETY

Although the roadway has been surfaced with the first layer of blacktop, the roadway traffic barricades and road closed signs will remain in effect so that construction workers can safely complete the remaining work on the project.

Now that that school is in session, please remember to remind children and students to keep away from the construction zone where construction operations are actively taking place.

SOD

Sod has recently been placed on several areas of the project. The contractor will be watering the sod for 30 days. After that date, homeowners will be responsible for watering their sod. Weather conditions will dictate the amount and frequency of watering. New sod requires 1 inch of water per week. During the first three weeks, avoid heavy or concentrated use of your new lawn. This gives the roots an opportunity to firmly knit with soil, and insure that the turf will remain smooth. Do NOT mow the sod until it is firmly rooted. When you do mow, leave a minimum of 3 inches of grass height following mowing and keep your mower blade sharp.

PROJECT CONTACTS

Informational newsletters, such as this one, will be sent to you periodically throughout the project. If you have questions or concerns at any time, please contact the on-site project representative, Mike Schmitz, at (507)-381-0756 or the project engineer, Glen Coudron, at (507) 380-1567.
