

**BOLTON  
& MENK**

Real People. Real Solutions.

## COMMUNITY & NEIGHBORHOOD PARK DESIGN & IMPLEMENTATION

Safe and high-quality park and open space amenities are essential to the well-being of our communities. Keeping these amenities current with the evolving trends in play and outdoor recreation is important and can also be challenging.

Our team of landscape architects, planners, and natural resource professionals are well versed in park and recreation trends and guide communities through the process of updating existing playgrounds and park amenities, as well as the planning and design of new passive and active outdoor spaces.

### Our portfolio of design and completed projects includes

- Playground design
- Splash pad and aquatic facilities
- Community events spaces and urban plazas
- Hard surface athletic courts (pickleball, tennis, basketball)
- Soccer and multi-use fields
- Softball and baseball fields
- School athletic fields and stadiums
- Outdoor ice and hockey rinks
- Open space and trails
- Canoe and kayak access
- Fishing piers
- Skate parks
- Natural playscapes

When we design parks, our team considers both the immediate and short-term investment of these amenities, as well as the long-term, life cycle costs. Our diverse team seeks to not only create fun and attractive amenities for our clients, but also to find opportunities to lessen our environmental footprint through the process, which may in turn reduce maintenance and input costs in the future.

### Benefits

#### Our team assists clients with establishing a vision for their parks by

- Evaluating community needs for specific programming and amenities
- Developing conceptual site plans that align with site characteristics
- Creating a realistic budget to plan into CIPs
- Identifying potential funding sources
- Completing construction documents for bidding and implementation

We understand the value of engaging community members and stakeholders in the design process. We work with your community to establish a creative vision that is realistic to achieve.

### Why Bolton & Menk

In addition to our talented design professionals, our team includes park and recreational professionals who have worked in the public sector and taken on the same responsibilities of our clients—the responsibility of using what is often limited budgets to make important and needed improvements for community park spaces.

We work as a team, with your community, and can bring design, engineering, community engagement, and funding to the table, all in-house.
