Protecting and Restoring Cultural and Natural Resources Benefits Everyone.

We offer a variety of environmental planning services including surveys, management plans, monitoring, documentation, and permitting. Our cultural and natural resource professionals offer expertise in cultural and ecological assessments, environmental planning, and environmental permitting. From roadside corridors to large-scale areas, we help find cost-effective and sustainable solutions that are right for you. We assess each project site and design a plan that delivers economical solutions to meet your goals.

Our decades of permitting experience help us, and you, navigate state and federal regulatory requirements, avoid surprises, and allow projects to proceed on schedule.

EXPERIENCED ARCHAEOLOGISTS

We have the depth of experience to aid in every phase of archaeological investigation. We help deliver projects, including unforeseen archaeological investigation needs, off-site research, and on-site excavations by professional archaeologists. When avoidance is not possible, we work to identify and evaluate or mitigate sites.

IN-DEPTH PERMITTING KNOWLEDGE

All impacts to wetlands and waterbodies must be properly permitted through both state and federal regulations. This includes delineating resources and quantifying or mitigating any impacts. Our natural resources team has a deep understanding of the nationwide permits of the Clean Water Act and the Wetland Conservation Act. We can navigate the complicated process of aquatic resource permitting, including no-loss and exemption applications and replacement plans (impact mitigation).

IMPROVING THE NATURAL ENVIRONMENT

Our restoration and mitigation team provide permitting, design, and monitoring services in the restoration of wetlands and prairies to create opportunities for landowners to improve the natural environment and/or collect income from selling credits due to erosion and other wetland and prairie conditions.

YOUR ENVIRONMENTAL REVIEW GUIDE

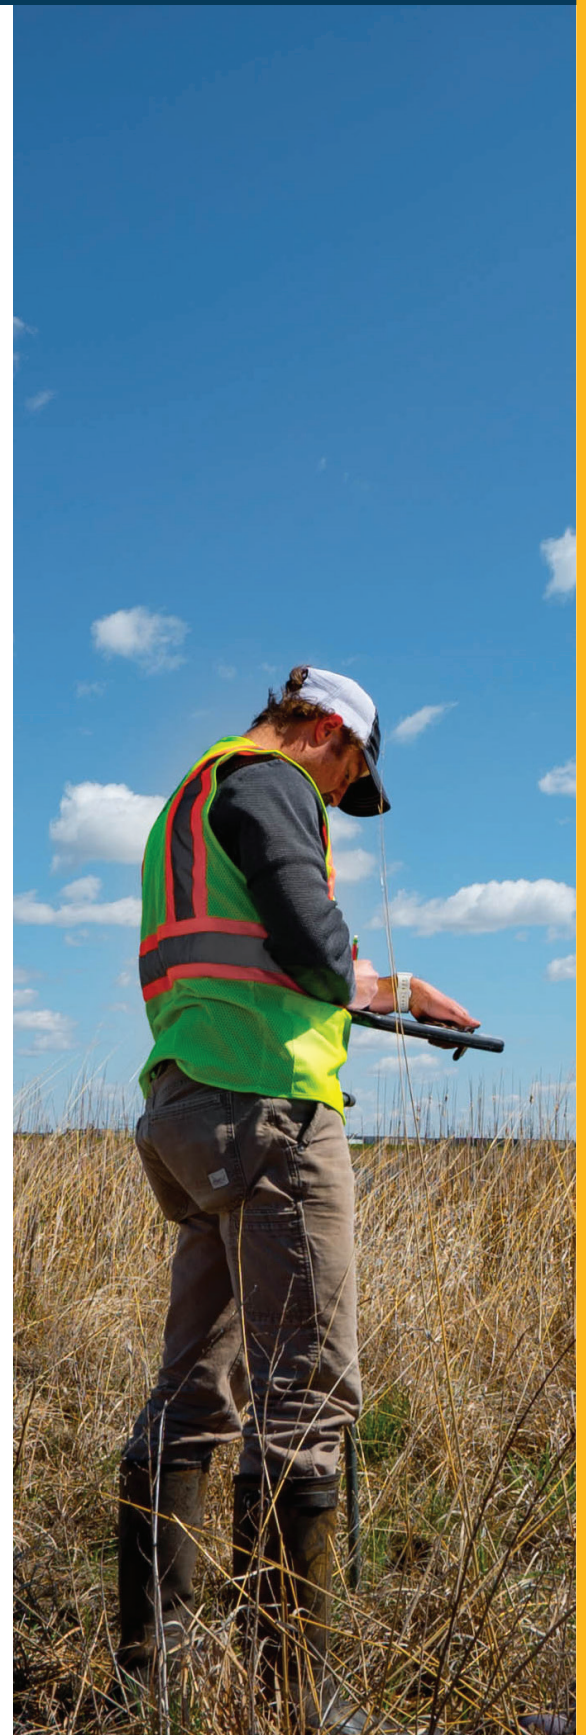

It is critical to consider environmental impacts and review/documentation requirements at the front end of any project. Our team helps limit these impacts and guide you to regulatory approval, ensuring review and documentation are completed in a timely and effective manner. We are here to help you navigate agency processes for federal and state funding programs requiring environmental reviews as part of the application and/or plan approval process.

WETLAND CONCERNS – ADDRESSED

Our specialists can help with your LGU service needs and allow you more control of your Water Conservation Act review time periods and Technical Evaluation Panel meetings. We can answer wetland-related questions and address local resident wetland concerns without going to the county or Soil and Water Conservation District, saving you time and money.

CONSIDERATE OF THE NATURAL STATE

Prior to developing an area that is in its natural state, species of special concern need to be identified. Our natural resource specialists can conduct many levels of threatened and endangered species, tree, wildlife, and plant surveys to meet our clients' needs.

**BOLTON
& MENK**

Real People. Real Solutions.

WE CARE.

Highlighting a community's unique history makes long-time residents, newcomers, and visitors alike feel welcome while maintaining a sense of place across all generations.

BOLTON & MENK LOCATIONS
