INPUTiD™

Online Public Engagement.

BOLTON & MENK

Real People. Real Solutions.

Bolton & Menk has designed a customizable web-based public engagement platform allowing stakeholders and the public to provide comments and interact with one another in a visual, userfriendly mapping interface. Users can add points, provide feedback, and optionally upload attachments such as photos and documents.

Other Geographic Information Systems Services

- GIS Technical Services
- Python Development for ArcGIS Platform
- Web & Mobile GIS Development
- GIS Implementation Planning
- Asset Management Implementation
- Utility Mapping/Infrastructure Management
- GPS Data Collection
- UAV Services
- 3D GIS Visualizations

Benefits

This tool is designed to

- Reach users/stakeholders who do not attend public meetings
- Engage with the public online
- Quickly visualize and evaluate the strengths and weakness of an area
- Start a dialogue to gather input and ideas for comprehensive plans, small area plans, corridor studies, and infrastructure projects
- Use collected geospatial data in maps, web applications, and final reports via a cloud-based application

How it Works

INPUTiD™ helps clients better engage with stakeholders and provide a more complete picture for the community, enabling residents to use a fun and easy web-based tool to share information via our clients' websites and social media outlets. This communication tool helps improve a community's ability to reach a broader audience, while providing a place where community members can interact with each other and/or staff.

Key Features

Promote Engagement

- Engage in a two-way conversation with residents, allowing them to interact when and where it is convenient to them

Increase Staff Efficiency

- Reduce operating costs and make your staff more efficient with better communication
- Communicate directly with other staff users and collaborate across departments in one central location

Reduce Calls and Office Visits

- Enable residents to find their answers via a customized FAQ

Final Reports

- Display data captured in a summary report or in figures

Resolve Requests Quickly

- Streamline request assignments through improved workflows and by hosting all requests in one place
- Resolve resident requests quickly with automated routing and notifications to the correct people
