

# SCHOOL SITE PAVEMENT MANAGEMENT REPORTS

Reduce long-term pavement reconstruction costs.

Many school districts have large parking lots with curbing, pavements, and sidewalks. Buildings and grounds staff have expressed interest in assistance to maintain existing pavements and manage maintenance costs. Bolton & Menk provides pavement management reports to school districts to help evaluate their pavements, life cycles, and projected costs. We strive to be the go-to consultant school districts know and trust for improvement needs.

## How We Can Help

Leveraging GIS data, we provide evaluations, map development, ground-based observations, and analysis to establish priorities and maintenance timelines for school districts, presented in a web-based maintenance report.

## Benefits

- Helps schools financially plan maintenance over time to manage their budget
- Provides information on parking lot construction dates, past maintenance schedules, and proposed future maintenance timeframes and costs
- Allows schools to eliminate financial peaks and valleys by distributing maintenance costs over time
- Prolongs the lifespan of pavement, resulting in a lower financial impact
- Report and data can be self-managed by the school or with Bolton & Menk

## Other K-12 School Site Services:

- Civil Engineering
- Landscape Architecture
- Site Planning & Campus Design
- Safe Routes to Schools
- Land Surveying
- Traffic Safety & Operations
- GIS Services
- Low Salt Design Strategies
- Performance Sports Fields
- Stadium Design
