TELECOMMUNICATION SERVICES

Hosting Wireless Infrastructure

The landscape of the telecommunications industry continues to evolve. With the highly competitive nature of companies vying to provide the best coverage, and fastest transmission of voice, data, and streaming services, new construction as well as facility upgrades is a never-ending cycle.

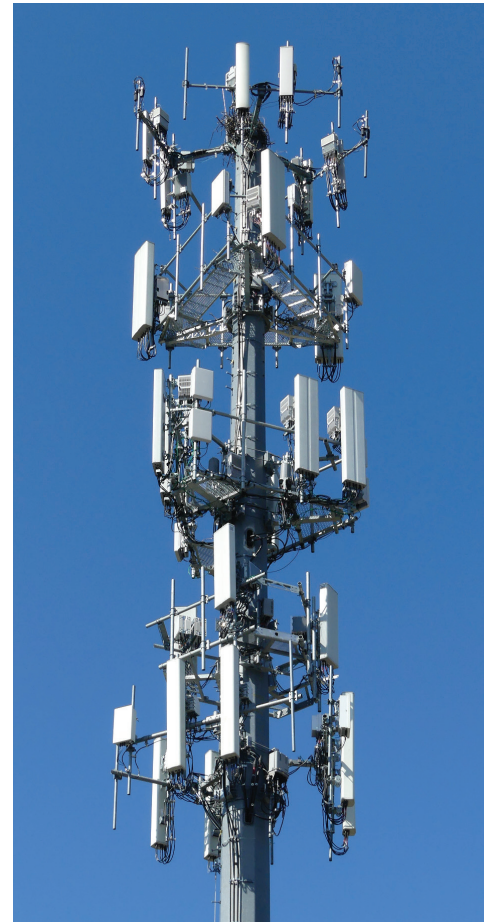

The placement of wireless infrastructure on city infrastructure, such as water towers, municipal buildings, or properties, provides a continuous source of revenue, especially for those in high volume corridors. Ensuring quality installation while maintaining standard operation of these facilities is a top priority. Our project approach and staff expertise in tower design, maintenance, and telecommunication site development can assist you in maintaining city infrastructure.

Benefits

Strong, reliable communication service has a positive impact on communities. Hosting wireless infrastructure within your community provides an excellent source of revenue that can reduce city budgets and system operation and maintenance costs.

Our Services

- Telecommunication lease and conceptual plan review
- Coordination for pass-through fees to tenants
- Pre-inspection to identify areas of concern and opportunities for correcting existing installations
- Site inventories and audits
- Site development
- Equipment coordination concerned with tower rehabilitation
- Project and site management
- Drawing reviews
- Shop and installation inspections of welding and protective coatings application
- 360° panoramic tours
