

WATER RESOURCES ENGINEERING

**BOLTON
& MENK**

Real People. Real Solutions.

SERVICES

Stormwater Planning & MS4 Management
Hydrologic & Hydraulic Modeling
TMDL Assistance & Implementation
Best Management Practice & Water Quality Improvements
Stormwater Reclamation & Reuse Design
Floodplain Assessment & Mapping

Culvert & Waterway Analysis
Wetland Services
Agricultural Drainage
Gravity Offshore Stormwater Systems
Coastal Resiliency
Stream & Wetland Restoration

We are passionate about taking care of the environment, because we live in the same communities as you.

Improving water quality, caring for our natural resources, and making sure areas are protected from floods takes cooperation from everyone. We carefully explore project needs, find innovative ways to reduce pollution, and create effective partnerships. Together we can protect your environmental resources now and for years to come.

As cities expand with more roads and buildings, managing stormwater becomes a bit more complicated. Our team of engineers, planners, landscape architects, wetland specialists, and other professionals plan for changing conditions. With custom solutions, we help make communities stronger and better able to resist harmful environmental, economic, and social impacts.

WE WORK HARD.

We work for your community with your needs and best interest in mind.

CLIMATE ADAPTATION AND RESILIENCY

Bolton & Menk has a successful history working with clients to mitigate runoff and flooding concerns. We integrate geographic information systems (GIS) with rainfall and flood event modeling to design precise ways to prevent flooding. By combining theoretical modeling with practical experience, we create designs that are resilient for climate changes. Our certified floodplain managers are familiar with the National Flood Insurance Program and can assist with correcting flawed floodplain maps, securing Letters of Map Change, and obtaining elevation certificates.

INNOVATIVE WATER QUALITY SOLUTIONS

By applying technology and standardization practices, such as using recycled products to reduce waste and cost or using aesthetic features with water quality measures, we create efficiencies in project delivery. You can expect quicker design turn-around, improved opportunities for quality assurance and quality control, and competitive pricing. At Bolton & Menk, innovation is at the heart of anything we do. We think outside of the box for a solution that helps us achieve your goals.

EFFECTIVE, HOLISTIC PARTNERSHIPS

We consider projects from our clients' perspective and treat them as partners—putting their best interest ahead of our own. Protection of our water resources requires dedication from state, county, and local entities, as well as collaboration between public and private stakeholders. We will help hone your communication goals, identify your target audience, and develop effective tools to create a customized approach. Through careful project exploration and effective stakeholder partnerships, we can protect our environmental resources for the next generation.

**BOLTON
& MENK**

Real People. Real Solutions.

INTENTIONALLY COLLABORATIVE.

We embrace relationships to build a better quality of life for all people using an adaptive project approach supporting each unique community.

BOLTON & MENK LOCATIONS

At Bolton & Menk, we believe all people should live in safe, sustainable, and beautiful communities. Our team is made up of planners, engineers, designers, technicians, and more who work hard to improve your community. We have more than 35 locations throughout the West, Midwest, and Southeast, each with dedicated staff ready to help your community. **For a full list of our locations and contact information, scan the QR code.**
